

# Epithelium Questions

Veer Bathwal

# Case 9: Match 1

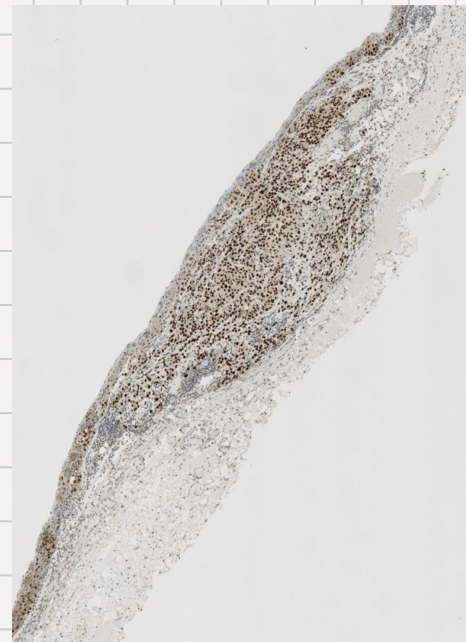

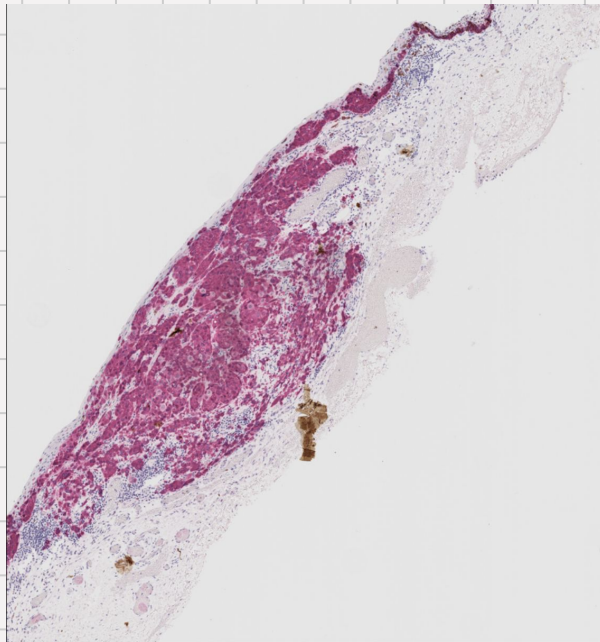

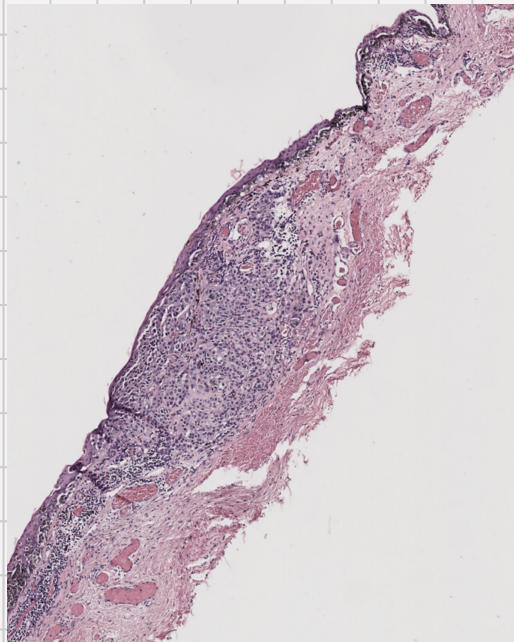

Melan Stain

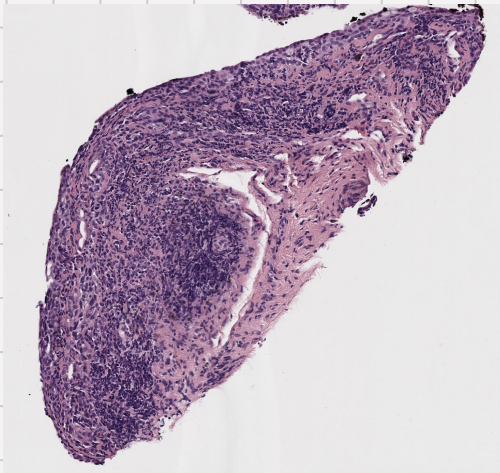

Contour – what I would mark as epithelium  
Blue circle – unsure how to mark

# Case 14: Match 2

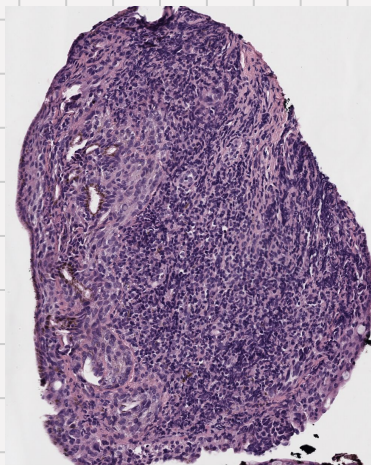

Not sure about all 3 stains. Is the epithelium just the thin strip on the left boundary, or does it also include the shaded region extending across the width of the tissue slice?

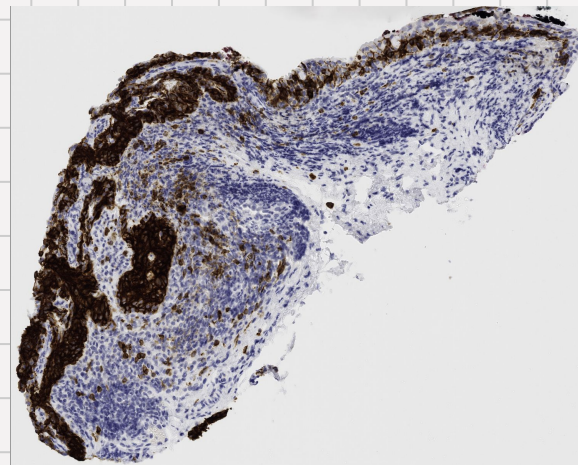

# Case 8: Match & Unmatched

Match 1, h&e

Unmatched 3, h&e

Match 1, melan

A few examples  
out of the 10  
slices in this case

Unsure about all matched and unmatched slices. Is this a case of the epithelium “invading” the stroma? If so, it is making it difficult to differentiate between what is epithelium and what is stroma. There are about 10 slices in case 8, so all of them are not displayed on this slide.
